Allowable Subject Matter

2. The following is a statement of reasons for the indication of allowable subject matter:
The art of record does not suggest the respective claim combinations together and nor would the respective claim combinations be obvious with:

As per claim 1: An apparatus for controlling an operation of a compressor comprising: a control unit for generating a control signal for selecting a main winding coil of a linear motor of a compressor when at least one of an inside temperature of a refrigerator and an ambient temperature is the same as or smaller than a predetermined reference temperature value or an auxiliary winding coil when at least one of the inside temperature of the refrigerator and the ambient temperature is greater than the predetermined reference temperature value; and a switching unit for selecting the main winding coil of the linear motor or the auxiliary winding coil on the basis of the control signal wherein the main winding coil of the linear motor is divided into a plurality of auxiliary winding coils, load capacity is determined based on at least one of the inside temperature of the refrigerator and the ambient temperature, and the control unit controls the amount of currents flowing into the winding coil of the linear motor by computing the generated control signal.

As per claim 8: A method for controlling an operation of a compressor comprising:
Applying power to a main winding coil of a linear motor of a compressor installed at a

refrigerator when an inside temperature of the refrigerator is the same as or smaller than the predetermined reference temperature value or to an auxiliary winding coil of the linear motor-when the inside temperature of the refrigerator is greater than the predetermined reference temperature value, wherein the main winding coil of the linear motor is divided into a plurality of auxiliary winding coils.
